Extensive experience in ETL Testing, Database testing and Functional testing. Targeting assignments in Software Testing and Quality Assurance.

Notice Period: Serving Notice

Skills	Professional Summary
Database Testing ETL Testing Functional Testing SQL Test Management Selenium Webdriver STLC and SDLC UNIX Informatica Power Center SCD1, SCD2 Mapping Agile Methodology Process Enhancement Cross-functional Coordination	• Extensively involved in ETL, Database testing, Functional testing, Regression testing and UI Testing. • Leading QA team of five members • Good knowledge of Agile Methodology. • Experience with tools such as ALM software (HP Application Lifecycle Management), JIRA, beyond compare, Control – M, Informatica and UFT. • Participating actively in Requirements grooming, Sprint planning, daily standups and sprint retrospective calls. • Grooming in Selenium Web Driver selenium, hybrid framework and report generation using TestNG. • Hands on experience with Macros and SQL tools (MS-EXCEL, SQL developer). • Experience in coordinating teams (Development, Business and Environment team) during analysis and test phases (SIT/UAT etc.) • Good Exposure to Software Testing Life Cycle and Bug Life Cycle. • Having good Judgment and problem solving skills while reporting and prioritizing software bugs in coordination with the Development team. • Self-motivated and highly adaptable to the demands of the project in terms of new requirements, meeting deadlines, delivering quality output. • Enthusiastic about learning new concepts in emerging technologies and domains.

Experience
5 Years 5 Months with Wipro Ltd. Designation – Senior Software Engineer

Education
2016 MS in Software Engineering from BITS PILANI (WILP) 2013 Bachelors degree from University of Mysore

Technical Skills
Test Management Tools : ALM software (HP Application Lifecycle Management), JIRA, beyond compare Languages & Scripting : Java, VBA DB Tools : SQL, Informatica Power Center, T-SQL, Control-M Operating Systems : Unix, Windows Automation Tools : UFT, Selenium

Major Roles and Responsibilities

- Leading **Agile Scrum QA team**.
- Test Data Generation for various use cases using **SQL**.
- Develop Test Scenarios and Develop SQL to validate TEST scenarios.
- Test Cases development and Test Execution in HP-ALM QC.
- SQL Result Analysis, Sampling and Defect Reporting and Re-testing once Resolved.
- Test Management - Requirement Analysis and clarifications, Test Estimation, Test Design, Tracking test execution, Test reporting and support.
- Test Requirement Gathering through Business Walkthroughs, Analysis and passing the functional/business knowledge to the team so as for them to come up with test scenarios and cases.
- Automation of UI using **QTP/UFT** using GTAF framework along with generation of test suite **html reports** to be published to the project.
- Coordinating with Onshore/offshore Development team, business team in order to get issues and clarifications sorted out and for a quick turnaround.
- Estimating test hours required for all the projects part of a release and getting it approved.
- Managing E2E SIT so as to deliver all the functionalities on time.
- Raising risks and issues to the project well in advance so as to have a mitigation plan or resolution on priority.
- Analyzing and identifying the repetitive manual tasks in the project and working towards automation of the same to save cost and efforts on the project.
- Worked closely with **Development and Business Team** during test case execution phase and helped them to identify and iron out issues.
- Generated various report from **ALM** and distributed to all stakeholders in a timely manner.
- Conducted sessions within the team on various subject areas.

Achievements

- Awarded “**Instant Karma**” twice for my contributions to AMRIT Project.
- Received special recognition from higher management for streamlining the QA processes for GRSR Project.

Personal Information

Name:	Ankitha
Date of Birth:	23/03/1992

Annexure

Projects:

Client Name: Credit-Suisse	
Project	AMRIT(Aggregate Management Risk Inventory Tool)
Domain	Investment Banking
Team Size	3
Methodology	Functional Testing
Skills	EBX-5,Excel,VB Macros, UI Testing, QC, JIRA
Role & Responsibilities:	▪ Leading Agile Scrum QA team. ▪ Test Management - Requirement Analysis and clarifications, Test Estimation, Test Design, Tracking test execution, Test reporting and support. ▪ Test Requirement Gathering through Business Walkthroughs, Analysis and passing the functional/business knowledge to the team so as for them to come up with test scenarios and cases. ▪ Automation of UI using QTP/UFT using GTAF framework along with generation of test suite html reports to be published to the project. ▪ Coordinating with Onshore/offshore Development team, business team in order to get issues and clarifications sorted out and for a quick turnaround. ▪ Supporting team by getting queries answered from the BA's. ▪ Estimating test hours required for all the projects part of a release and getting it approved. ▪ Managing E2E SIT so as to deliver all the functionalities on time. ▪ Raising risks and issues to the project well in advance so as to have a mitigation plan or resolution on priority. ▪ Analyzing and identifying the repetitive manual tasks in the project and working towards automation of the same to save cost and efforts on the project.
Project Description: AMRIT is the tool designed to respond to the Feed regulation, serves as an inventory for all models within CS globally, provides workflow functionality for Model Validation process. The Key challenges derived out are to understand firm wide exposure to model risk and to ensure that appropriate governance is in place, proportional to the risk. To achieve this objective an Aggregated Model Risk Inventory Tool AMRIT is required	

Project	GRSR (Global Regulatory Shareholding Reporting)
Domain	Investment Banking and Finance
Team Size	4
Skills	Functional Testing, Database Testing, Quality Center, JIRA,SQL, Control-M, Beyond Compare, Unix, Informatica Power Center and Selenium Webdriver

Role & Responsibilities:	▪ Responsible for designing & writing Test condition and Test Cases for GRSR application. ▪ Responsible for execution of Test Cases which involves verification at front end and Back end both. ▪ Conducted Test cases walk through with Business (Singapore) and change team (Singapore) of Credit Suisse for sign-off. ▪ Worked closely with BA teams during Test case requirement and SIT/User Acceptance Test phase. ▪ Created utility Spread Sheets (MS-Excel) using Macros for our team. ▪ Conducted business domain training for new joiners. ▪ Defect management which involve raising defect, defect Retesting and reporting, defect follow up with respective team. ▪ Defect and execution status reporting to the project. ▪ Flagging up critical issues and risks in advance so that it can be taken up at initial stages and closed. ▪ Automation POC for the application. ▪ Responsible for handling a component individually. ▪ Training to new members on project related application. ▪ Working on multiple components of a release and responsible for tracking each component till sign off. ▪ Validating data from source and destination, testing the Informatica mappings which are based on SCD-1 and SCD-2 ▪ Handling a team of Four members
Project Description: GLSR is the business function within Compliance for aggregating, monitoring and reporting the equity exposure based on a local jurisdiction regulatory requirements or a company articles of incorporation. Currently, the three divisions of Credit Suisse, namely Private Banking (PB), Investment Banking (IB) and Asset Management (AM), must manage and maintain their own individual organization and technical solutions for GLSR reporting.	

Project	LCDB (Legal Compliance Database)
Domain	Investment Banking
Team Size	7
Methodology	Agile
Skills	Functional Testing, Database Testing, Quality Center, JIRA, SQL, Unix and VB Macros

Role & Responsibilities:	▪ Understanding and analyzing the functional requirements. ▪ Understanding the Data Stage Requirements, identify related procedures. ▪ Providing Test and Development teams with walkthrough of the FRDs and assist them throughout Dev/Test cycle. ▪ Undertake data analysis to understand issues and propose solutions. ▪ Assess the impact of Change Requests on proposed solutions and identify risks and benefits of their implementation. ▪ Responsible for designing & writing Functional specification and Test conditions and Test Cases ▪ Responsible for monitoring and scheduling E2E test activities so as to ensure qualitative delivery. ▪ Used JIRA for capturing changes and new tasks ▪ Actively involved in day to day scrum meeting with teams in order to accommodate business requirement changes. ▪ Worked closely with Development and Business Team during test case execution phase and helped them to identify and iron out issues. ▪ Test Data Generation for various use cases using SQL. ▪ Generated various report from ALM and distributed to all stakeholders in a timely manner. ▪ Conducted sessions within the team on various subject areas. ▪ Develop Test Scenarios and Develop SQL to validate TEST scenarios. ▪ Test Cases development and Test Execution in HP-ALM QC. ▪ SQL Result Analysis, Sampling and Defect Reporting and Re-testing once Resolved. ▪ Communicating with Clients and Coordinator to understand requirements, or issues encountered while Test Execution. ▪ Test execution includes Database Testing, Feed Testing, ETL Testing, Extract Generation to Downstream and Job Handling.
Project Description: LCDB (Legal Compliance Database) as the name suggests is a Data Quality and Data security project of Credit-Suisse. LCDB manages/validates the Credit-Suisse security data across subject areas like Product, Trade, Positions, Account and Customer Details. LCDB takes input data from multiples Source Servers and then from Source to Target transform the data based on logic implemented and provide a processed extract File to Downstream application.
