Project 4	
Project Title	HIE (Health Information Exchange)
Client:	Nike, Jockey, DHL
Position:	Technical Writer, Technical Analyst
Location:	Bangalore

Description:

SCALE is Manhattan Supply Chain Product built on Microsoft.Net technologies. This is a warehouse management product that handles all the key warehouse operations in areas like Inbound, Out-bound, Inventory Management and Cycle Count etc.

Inbound operations deal with operations like – checking in and locating the inventory from trucks into the physical locations within the warehouse while Outbound deals with – shipping, packing and loading the inventory onto the truck etc.

The product consists of both windows and web component. While Windows component is a standalone application built on C#.NET and Windows forms used either by a warehouse manager or supervisor for tracking inventory within the warehouse, the web component is a warehouse device (RF) used by workers within the warehouse for executing warehouse operations. The product has around 200 customers in all the geographies.

Roles and Responsibilities:

- Planning, writing, editing operational and instructional manuals, maintaining paper- and Web-based publications.
- Documenting engineering processes and specifications for software development lifecycle, product delivery, and product and patch releases.
- Ensuring technical correctness of content by gathering inputs from subject matter experts by effective questioning and information-gathering techniques.
- Working with team members including writers, proof-readers, documentation managers and SMEs.
- Troubleshooting client production issues, handling client calls.
- Documenting edited & formatted Defect Reports, RCA reports, Release Notes etc.
- Resolving the application performance issues by analyzing the long running queries, crash files and windows dump files using SQL Query Optimizing Tools, Windows Debugger and Debug Diagnostics Tool etc.

- Used Visual Studio Team Foundation server as version control.
