RAILS PROJECTS

Project #1:

Project : EasyWayOrdering
Environment : Ruby on Rails, MySQL, JavaScript, JQuery, Bootstrap, CSS
Role : Developer.
Team Size : Four.

Description : The EasyWayOrdering a leading online Food ordering system serves Small and medium restaurants an online ordering convenience. We developed a web application where Resellers can market this web application package to multiple numbers of Clients (Restaurants owners). Restaurant owners can use this application as their own Restaurant Website, where they are provided with many advanced online ordering features, which strengthens their brand identity, increases the customer loyalty and stream line their ordering processes.

Roles and Responsibilities:

- Planned and carried out daily scrums, weekly estimations.
- Developed many consumer based features in Agile environment using Ruby on Rails.
- Used Devise for User Authentication.
- Implemented and enhanced CRUD operations for the applications using the MVC architecture of Rails framework and Ruby 2.2.3 conducting code reviews.
- Worked with Restful Social API's for Facebook ordering.

Project #2:

Project : Dashboard and reports of Podcast/Download.
Client : Infoble, Chicago.
Environment : ROR, MySQL.
Role : Reports.
Team Size : Four.

Description : It is a dashboard application developed for Infoble a Chicago based audio content provider. This application will generate visual charts according to the category to display the data in database. This system will provide the chart representation of audio content downloads per day of this site in different angles like Downloads by Device, Downloads by Country, Top Five Downloads, Downloads by Podcast Title etc.

Roles and Responsibilities:

- Exporting the reports to Excel and CSV.
- Reports of Podcast Downloads by User Segment and House Keeping account.

- Populated the data in column stacked chart.

Project #3:

Project : iForms
Role : Developer.
Team Size : Five.
Environment : ROR (2), Webrick, HTML, CSS, AJAX, JavaScript, MySQL

Server.

Description : iForms is a cloud app for filing the communication gap between patients and doctors. This is a SaaS solution hosted on Rackspace cloud servers, allowing data segments of service providers/hospital to their related data. It allows service providers and patients to talk electronically and also exchange forms and information online.

Roles and Responsibilities:

- Worked on Front-end using HTML, CSS, and JQuery for better look and feel.
- Created controllers, helpers, models, views, and partials in the application.
- Designing the database
- Worked with Active record Classes from Rails Console for Database programming, which also involved writing active record validations.
- Writing the functional, unit and integration test cases using the rspec.
