Experience (4.4 years)

PriceLabs

Apr 2022 – Present

Full Stack Engineer

- Led development of web applications using **React** and **Ruby on Rails**, achieving an **average page load time reduction of 30%**.
- Optimized CI/CD pipeline with **Jenkins** and **Docker**, reducing deployment time by **40%**.
- Mentored junior developers, conducting code reviews and promoting best practices, leading to a **15% reduction in bugs**.
- Collaborated with cross-functional teams to deliver features, improving user retention by **10%** and aligning with product goals.
- Applied design patterns to improve code maintainability and reduce duplication.
- Worked on scalability improvements, refactoring key services to handle higher traffic loads efficiently.
- Resolved high-priority user-reported issues, achieving a mean time to resolution of **under 24 hours**.
- Enhanced backend performance by optimizing database queries and reducing load times by **15%**.

TA Digital

Dec 2020 – Apr 2022

Associate Software Engineer

- Developed AEM components and templates using **Java**, enhancing website functionality and providing an improved user experience.
- Contributed to sprint planning and retrospectives, resulting in a **5% increase in sprint efficiency**.
- Designed and documented simple workflows in Java, reducing manual content updates by **10%** and increasing team productivity.
- Collaborated in code reviews, improving code quality and knowledge-sharing within the team.
- Provided detailed documentation and training sessions to enhance client teams' understanding of AEM capabilities, increasing team productivity.
- Provided documentation and training for clients on AEM functionality, reducing support requests by **10%** and enhancing client autonomy.

Technical Skills

Front-End Development: HTML5, CSS3, JavaScript, Typescript, jQuery, React Js, Node js

Back-End Development: Java, Ruby on Rails

Data Structures and Algorithms: Arrays, Linked Lists, Trees, Graphs, Dynamic Programming, Search and Sort, Hashing, Sliding Window, Recursion

Database: MySQL, SQL

Version Control: Git, GitLab CI/CD

DevOps: Docker, Jenkins

Projects

DineEase - Restaurant Management System | *React, JavaScript, .Net Core API, SQL, Fabric.js*

Apr 2022

- Developed a single-page application for managing restaurant orders, reservations, and online deliveries, using React and Material UI for a user-friendly interface.
- Integrated real-time order tracking and map features for delivery, providing customers with accurate delivery updates.
- Implemented table arrangement functionality using Fabric.js, allowing managers to customize and visualize seating layouts within the app.
- Enhanced user experience with features like cart management, order history tracking, and real-time notifications for order progress.

CustomCraft - Product Customizer | *React, Node.js, MySQL, Java, Spring Boot*

March 2021

- Developed Java-based backend services using Spring Boot to manage product data, user preferences, and real-time customization logic.
- Designed and implemented RESTful APIs for product customization, ensuring efficient data processing and smooth integration with frontend.
- Implemented secure authentication with JWT to protect user data and ensure secure access to customization features.

Education

Kakatiya Institute of Technology and Sciences (KITS)

Aug 2016 – May 2020

Bachelor of Technology in Information Technology (CGPA: 8.72)

Warangal, Telangana
