
PROFESSIONAL SUMMARY

- Over 6 years of professional experience in the field of IT as a Software Quality Assurance, with diversified skills in Manual and Automated testing.
- Specialized in system study and testing Health Care, Financial, Mortgage, Mobile Apps (Android, BB, Windows & Iphone) Insurance, Tele Communications, Retail, E-Commerce and Banking applications developed on various technologies such as J2EE, JSP, Java, CRM, Seibel, SharePoint, VB.Net, Oracle and SQL Server on Windows NT/2000/XP and UNIX environments.
- Extensive knowledge of Software Development Life Cycle (SDLC) working on Web, GUI, Database, client/server and distributed web-based systems.
- Experience in defining test cases, developing and maintaining test cases, and documenting all phases of the QA process.
- Extensively used Mercury Quality Center for writing and executing test cases, test plan, defect tracking and prioritizing defects.
- Expertise in manual and automation tools, Quality Center, Quick Test Professional, Load Runner and Defect Tracking Tools (QC, Jira, Clear Quest, Mantis, TFS & BugZilla)
- Proficient in all forms of testing including Functional, Regression, Smoke, Integration, System and User Acceptance Testing (UAT).
- Experience in SQL queries to perform backend testing.
- Expert in designing and maintaining Test Plan, Test Cases, Test Matrix and both Functional and User interface specific documents.
- Strong Team Player, have excellent verbal and written communication skills and strong documentation skills as I worked on variety of projects and have acquired strong interpersonal & analytical skills. Also, ability to quickly learn new applications.

TECHNICAL SKILLS

Languages	HTML, JavaScript, XML, VB, ASP, JAVA, .Net, COBOL
RDBMS	SQL Server 2008/2010, TOAD, IBM DB2, Oracle, MySQL, and Microsoft Access
Operating System	Windows 98/2000/XP/VISTA/WIN 7, UNIX
Testing Tools	Quality Center, QTP, Load Runner, Sharepoint & Selenium
Defect Tracking	Quality Center, Jira, ClearQuest, TFS, BugZilla, FireBug & Mantis
Methodologies	Agile/Scrum, Waterfall, RUP, UML & Business Process Testing
Office Tools	MS Word, MS Excel, MS Power Point, MS Project

EDUCATION

- **Masters in Business Administration (MBA)**, Pune.
- **Bachelor of Commerce (B.Com)**, Hyderabad.
- **Diploma in Computer and Commercial Practice (D.C.C.P)**, Hyderabad

PROFESSIONAL EXPERIENCE

TransGraph Consulting Pvt Ltd, Hitech City, IN

Jan 2015 –Till Date

Description:

TransRisk is a Value-at-Risk (VaR) based Risk Management solution with its algorithms customized to suit the needs of commodity players. It is a web-based market risk management solution provides manufacturing, processing and trading companies with a robust, customizable and stable commodity, currency and Interest risk management solution. Based on Risk framework, a widely accepted global standard for measuring and decomposing risk, TransRisk, a decision-enabling Business Intelligence tool helps measure and manage risk. It calculates net exposures based on the business process and allows users to have single accurate, view of exposures, mark-to-market P&L and risk across the organization, thereby bettering the synchronization of business strategies.

Client : Multiple (Wilmar, Golden Agri, R1 International, Apical, ITC)

Role : Test Lead/Support

Responsibilities

- Understanding the Business Requirements by attending the meetings with product team and business analyst
- Playing dual role, managing the Implementation, as well as being the person they call for Support.
- Responsible for ensuring the successful implementation of our Risk Management product within our clients' environment. The role is responsible for consulting, project management, and client relationship management.
- Have the flexibility to be a functional product expert and project manager
- Develop deployment plans, integration requirements, prioritization and overall management over the life cycle of the project
- Lead planning and management of multiple client implementations concurrently
- Partner with sales and client project manager to develop a deployment plan that accounts for both functional and technical work streams of the project
- Manage expectations and deliverables during implementation
- Active communication with the Clients
- Remotely Implement software, and perform Verification and Validation activities
- Maintains the customer support queue and tracking system (Mantis). Ensuring that items are correctly recorded and classified for analysis and decision-making.
- Record Customer suggestions and feature requests to share with Product Management
- Managing all functions of Software Quality Assurance and Test Management including planning, define/design, review and execution control.
- Plan the tests including selecting test approaches, estimating the time, effort and cost of testing, defining test levels, cycles, and Process improvement.
- Involving the Impact Analysis for the future releases.
- Attending the Weekly/Daily stand up meets with internal teams and customers.
- Monitoring the testing progress and ensuring all the work packages delivered on time.
- Discuss about bug behaviour with Dev team for better solution
- Involved in AAA client CxC Infra Project Upgrade - Go-Live Signed Off & Closure.
- Participated in DB Migration Testing (SQL 2008, 2012 & 2014)
- Generation of Monthly and Quarterly Review Status Reports.

Environment: Windows 7 Professional, .Net, SQL Server 2010 & Team Foundation Server.

Role : UAT Tester/Support

Responsibilities

- Reviewed Business, Design and Functional Requirement Documents and understood the overall flow of the business and listed operational order flow.
- Tested the connectivity between Everest and Non-Everest systems that helps in avoiding any environment related roadblocks for the subsequent cycles 1,2 & 3.
- E2E Cycle 1 – Approx: 220Variations
 - a) Cycle 1 scope will comprise of all High Priority Regression variations identified for R3
 - b) Scope for Cycle 1 will also include the new variations identified for R3
- E2E Cycle 2 – 220 Variations
 - a) Cycle 2 scope will comprise of all Medium/Low Priority Regression variations identified for R3
 - b) Also covers re-execution of new variations identified for R3
- E2E Cycle 3 – Approx: 30 Variations
 - a) Cycle 3 will be primarily to re-execute failed and Blocked and any spill over variations from Cycle2
- Worked on IBM Sterling OMS & Sterling Call Center Access Changes, addition of "Returns admin" role and removal of "Returns specialist" and also Reviewed User Roles Maintenance (Guest/GCC Agent)
- Reviewed "Timeout setting for payments/Fraud Payments" and Implemented time-out parameters for payment web services invocation"
- Executed 250 Regression TC's covering critical order management flows and interactions with downstream systems like eDW and 30 eStore specific TC's covering critical flows outside of order management and validated the feeds pertaining respective systems like Prism, WMS, Innotrac, OHL, DVS, SPAM, LID, DAS CSL, Print Vendor, COM, POS, GENCO, EDW/ADW, eDW, GRDA, TRLS, Home Direct & PILOT; also confirmed the availability of systems for E2E testing highlighting any conflicts with other releases/testing activities planned for other systems.
- Tracked the defects, prepared status summary reports and reported defects using **Jira**.
- Involved in whole process of **UAT (User Acceptance Testing)**
- Working knowledge of RDC using Citrix

Environment: Windows 7 Prof, SQL Server 2010, SharePoint & QC, IBM Sterling OMS

Role: ETL/Back-end Tester

Responsibilities

- Studied the mapping of the use cases from the **Functional Specification Document** with the **Design Document, flow charts, mockups**, interacted with business analysts and functional managers to clarify issues upon business requirements.
 - b) Understood an overview of business requirements,
 - c) Listed operation assumptions taken to design the case

- d) Provided implementation details in terms of the interface attributes that take care of the various inputs required for the eagle tools used.
- e) Identified detail procedure logic that will be used to do the required processing that provides Database mappings and validations.
- f) While mapping the data fields / attributes, certain fields that could not be mapped to the existing database and are Russell-specific, have been identified.
- g) Identified Outline Error Handling Methods.
- h) File format comparison according to requirement mentioned in respective documents.
- i) Column mapping comparison between data file and PACE tables.
- j) Data comparison between data file and PACE table.
- k) Transformation if exists. For example in file we have data EQ, but in data base we need to store Equity. We need to refer design/requirement documents for that.
- l) Data/Feed comparison between PACE tables and exported files.
- m) Data/Feed comparison between different environments like staging1, staging2 and target database.
- Experience in reading Logical and Physical Data Models and Entity Relationship diagrams and write necessary SQL queries for identifying test data
- Extensively worked on Test Executing SQL Queries for backend testing to check the flow of data from source to target parsing thru different staging and loaded into target tables.
- Experience using flat/feed files and files while execution testing.
- Validated Security data related to equities, received from Bloomberg Back office data file, into the PACE environment and then loaded into Target tables of Russell thru ETL Job
- Tracked the defects, prepared status summary reports and reported defects using Jira.
- Involved in whole process of UAT (User Acceptance, Integration, end-to-end)
- Working knowledge of RDC using Citrix

Environment: Windows 7 Professional, SQL Server 2010, Jira

Client: Shire Pharma, Chesterbrook, PA

Jan 2012 – Nov 2012

Role: QA Analyst

Responsibilities

- Developed Test Cases as they were upgrading their current Sales Force /SalesPro version 3.1 thru 4.0.
- Responsible for modification and executing of the Test Scripts manually.
- Involved in Functional, Integration, and Regression testing of the application.
- Identify, document, and review test conditions / test cases with help from core team
- Accountable and supportive for identifying Test scenarios
- Responsible for assisting with Requirement Traceability Matrix (RTM)
- Responsible for executing the scripts and signing-off on the pass/fail status of each step with the help of leads
- Involved in testing the application after applying SIEBEL patches to the software to verify the security check on all the browsers.
- Identify SIEBEL application Defects and
 - Log software defects in JIRA
 - Triage with other team members prior to logging defects
 - Re-test defects after fixes are completed

- Document test results in JIRA
 - Document actual results of each step in the test cases
 - Update the test conditions that passed/failed
 - Document the test script conditions
 - Update documentation to reflect which conditions were tested, what the actual results were, whether the conditions passed /failed, and what defects were logged.
- Escalate test coverage issues to the Sales Force/SalesPro appropriate system test coordinator, TEST lead, and/or team leads.

Environment: ERP/SIEBEL CRM 7.8, Windows 7/2000/XP, Toad, JIRA

Client: BalineMD, Jacksonville, FL

Jan 2011 - Dec 2011

Role: QA - Interface Analyst

Responsibilities

- Analyzing FRD, BRD, SRD, for any product enhancements to be developed; preparing test plan and test cases accordingly using HP Quality Center for all the ongoing product development.
- Used HIPAA 4010 transactions to support the analysis of current business processes and work with management to improve and implement enterprise solutions to ensure compliance and got involved in designing future state processes for HIPAA 4010 transaction processing EDI's 837,835, 270, and 271.
- Identified appropriate CTP and ICD 9 Codes while processing EDI transaction for 835/837.
- Tested and implemented the software at various practices and hospitals.
- Assisted informational needs in mapping of Test Cases.
- Analyzed inbound X12 HIPAA files and execute Trading partner testing and integration.
- Performed GAP and Impact analysis for ICD - 9 changes and HIPAA EDI 4010 changes.
- Identify processes and systems to enable to trade files with non ICD-9 complaint trading partner. Monitor and resolve testing issues.
- Performed GUI testing, Integration testing, Regression testing, Ad -hoc testing, Negative testing, End to End testing, Load testing, User Acceptance testing on multiple projects
- Involving all the major departments within Health Care like Provider, Eligibility, Benefits, Member Services, Authorizations, Claims Submission, Patient Membership Enrolment, Transcription, Appointments, Charge Capture, Prescription, Labs, Documents, Forms, Referrals, Billing/Generating Claims for Medicare and Medicaid, Long Term Care, 270/271, 834, 835, 837
- Used RMT for running the tasks like uploading, modifying, executing and taking logs accordingly.
- Updated status report on weekly Basis and submitted to the team prior to weekly meeting.
- Participated actively in conference calls, project meetings and delivered input

Environment: ASP.NET, SQL, UNIX, Oracle, Windows, Quality Center.

Role : Business Analyst

Responsibilities

- Gathered the business requirements from the users and stakeholders by face to face questionnaire interviews, prioritized those requirements, and documented them then and there on the available system.
- Played a vital role to ensure the methodology delivered work's progress and documentation; replaced a traditional methodology of SDLC and suggested and implemented a new one.
- Developed a test plan and test cases according to the requirements; clearly stated how, when and where test plan is going to be executed.
- Acted as a liaison between the IT and business resources; Acted as a resourceful candidate between those two.
- Interfaced with SMEs to prepare BRD documents for ongoing projects; take first-hand information from them and correspond it while preparing BRD.
- Identified growth prospect (where we are and where we can be) and recommend solutions to be at better off.
- Created a database and linked them with one another in Microsoft Access and thereby retained all the necessary data for future retrieval.
- Participated in full implementation life cycle of a project from requirements analysis up to the end, i.e. implementation.
- Managed, coordinated and lead a team towards the accomplishment of tasks; put the team members in a learning curve so that everyone can be equally productive.
- Involved in data quality, data mapping and validation issues with other members.
- Prepared weekly status reports to report what's going on and also disseminate the progress report to all the team members.

Environment: Microsoft Office 2010 (Word, excel, PowerPoint, Access), Oracle 10g, Java/J2EE, Rational Rose, Requisite Pro, HTML, SQL/MYSQL, Microsoft Visio, ClearQuest, C/C++, Visual Basic, XML.
