Software Engineer

EEsoft Pvt. Ltd. (Oct 12 – Jan - 15)

Inbot: I was a valuable asset to the team which built the product Inbot which possessed the capability to serve millions of requests per day, with ninety percent test coverage. As a part of this product development, I had taken the complete responsibility of building three modules: Student Tracking, Fee management and Examination.

Mailgati: Mailgati is an email marketing automation tool, which is built to send out millions of emails per month and to track the status and this helped to generate more number leads for Quikchex product.

- . I built this product from the scratch based on the requirements given by digital marketing team, we used Ruby on rails and mysql as our core technologies and sent mail using sendgrid and amazon smtp servers.

- . Wrote sql procedures to sent more than 1000 emails per minute from different servers to achieve better open rates.

Remote Work

Basicslife Support System: Basicslife is an indian menswear e-store, I implemented support system for tracking and addressing customer complaints.

- . Built using ruby on rails, active admin, postgres as core technologies.
- . Used trello and slack for collaborating with remote teams.
