Career Summary

An accomplished ISTQB certified quality engineer specialized into object oriented software testing and quality assurance with an extensive expertise of 5.11 years in SDLC & STLC fields in IT arena. Dynamic, team spirited and performance driven **Software Testing Engineer** with required knowledge of software Test design processes including Test Implementation techniques, Combining the logic blocks and test management tools such as **Win Runner (8.0), Test Director (8.2)** teamed with quality management control and tracking coordination. Expertise in testing **Web Based** and **Client Server** Applications on Windows, Linux and Solaris platform including application installations. Technically able and trained at handling Quality Management Systems [QMS] enhancing overall quality levels & functional knowledge using testing strategies such as Functional, GUI, User Interface, Compatibility Testing.

Able troubleshooter with effective capabilities of resolve issues, efficiently meeting and achieving challenging goals. Skilled at providing customers and end users help desk support, easily identifying and resolving technical issues and concerns with effective communication and presentation capabilities.

Career Objective

Dedicated and disciplined Software professional seeking the position of **[Software Test Engineer]** to, contribute to the company's growth and in turn ensuring personal growth with in the organization. I believe that my technical, functional and communication skills will enable me in facing the challenging career ahead

Core Competencies

- **SDLC & STLC**
- **Design and Development of Test Cases**
- **Win Runner (8.0), Test Director(8.2)**
- **Manual Testing**
- **Testing Methodologies**
- **Process Enhancement**
- **Quality Assurance**
- **Bug Tracking**
- **Configuration Management**
- **Customer Service/ Support**

Key Achievements

Worked on 4 different projects, was never on bench
Worked on Portfolio, Security, Order Management (Yantra), Retail, Portfolio Management domain
Posted highest no of bugs in one of the project

Professional Experience

Senior Test Engineer
Test Engineer

Applabs Technologies Pvt Ltd
OSI Technologies Pvt. Ltd.

May'10 - Present
Nov' 05 - May' 09

Key Responsibilities

- Facilitate Quality Assurance activities for an ambitious and critical project for the company.
- Developed Project management skills to manage project teams and ensure QA is effectively Practiced.
- Working on required analysis, test case designing and execution the test.
- Analyzing, tracking and resolving the bugs found during the process and reporting it to the concern department.
- Finding the bugs and testing the applications, logging Defects and executing Test Cases.
- Executing Test strategies in different ways (Functionality Testing, Regression Testing, U I Testing, Re Testing, Integration Testing).
- Tested Application using Safari, Firefox 2.0, IE 6.0 and IE 7.0 browsers.

- Negotiating skills to push and ensure QA process within software development
- Ensuring clients 's requests are suitably addressed, Quality Issues raised during testing, review or project
- Executing the trackers to closure rate and delivering the products as per the customer expectations
- Maintaining and updating the training and audit databases to provide reports / indicators for discussion during SQA management review meetings.

Projects Completed

Client Name	Market Axxess (BFSI Domain)
Project Title / Name	Market Axxess
Project Duration	Jan'14-Present
Project Location	USA
Team Size	10
Role	Test Engineer
Software / Tools / Technology Used	Java, Jboss, JSP Servlets, Ajax, Windows 2000, Windows XP, Windows 2003 Server

Project Description

MarketAxxess operates a leading platform for the electronic trading of corporate bonds and certain other types of fixed-income securities, serving as an electronic platform through which more than 800 active institutional investor clients can access the liquidity provided by MarketAxxess 80 broker-dealer clients. MarketAxxess multi-dealer trading platform allows the institutional investor clients associated with Market Axxess to simultaneously receive competitive, executable bids or offers from multiple broker-dealers, and to execute trades with the broker-dealer of their choice. MarketAxxess also offers a number of trading-related products and services, including: market data to assist clients with trading decisions; connectivity solutions that facilitate straight-through processing; technology services to optimize trading environments; and execution services for exchange-traded fund managers and other clients

MarketAxxess Trading platform provides the following listed features to its Clients and Dealers

Trading of bonds in several market segments like US High Grade, US High Yield, US Emerging Markets, Emerging Markets Local Markets, US Agencies, Preferred Stocks, US Asset Back Securities, Credit Default Swaps etc, in the US market and more than 60 products in the European Market

It allow the Clients and Dealers in performing Post Trade Allocations, which are done after the trade is completed

It supports Pre-Allocations, allocations which are done at the time of initiation of the inquiry by the client before submitting to the Dealer.

Market Axxess provides the facility of Amendments. The Client or the Dealer can Amend the trade as required after or before the trade completion.

It also supports Cancellation of the trade before and after the trade completion

Market Axxess has provided one of the best features, Transition Management which is nothing but the Portfolio Management where MarketAxxess acts as a Principal to its Customer and performs trade for the customer by buying and selling the assets of the customer where Market Axxess takes the responsibility till settlement. It also facilitates Agent trades where Market Axxess performs trades on behalf of the customer, here market axess will play the role of a risk less principal.

Market Axxess facilitates the Client or Dealer for Request for Quote where the Clients and Dealers can request their counter parties for Buy or Sell price. It also provides the facility of submission of several types of orders to the Clients like Market List Order, Quick Order, Click To Trade Order where the prices are known to the Client before the order submission itself.

Responsibilities

- Going through the Functional specifications and understanding the Requirements
- Identification of Scenarios for validation of the Functional elements
- Authoring of test cases for the Identified scenarios and Reviewing the test cases as per the Requirement Specifications
- Maintaining the test cases in Quality Center
- Execution of Functional, Regression test cases and performing ad-hoc testing on different builds.
- Verification of messages received in components like FIX, SOAP and STP Messenger
- Creation of templates and Scenarios using VeriFIX tool to validate the FIX messages
- Reviewing and Reporting the bugs in the Rational Clear Quest
- Coordinating with the Team

Client Name	Axeda
Project Title / Name	Axeda
Project Duration	Oct'13-Present
Project Location	USA
Team Size	10
Role	Test Engineer
Software / Tools / Technology Used	Java, Jboss, JSP Servlets, Ajax, Windows 2000, Windows XP, Windows 2003 Server

Project Description

Axeda Service Link (formerly Axeda DRM an Azure based application) is the enterprise software system that enables product manufacturers to provide a new generation of high-value remote services. Their customers are using Axeda remote management software to maximize the value of the products they sell through services that increase uptime, streamline operation, and reduce cost of ownership. These companies benefit from increased revenue through product differentiation and higher value service contracts, all delivered at lower cost.

Axeda provides the results-aligned applications you need to get the most out of your remote services program, and the proven technology that delivers results fast.

Responsibilities

- Actively participated in review meetings, Requirements changes in functional review meetings and regular Status meetings.
- Involved in Localization Testing and Branding Testing(L10N) across different browsers like Chrome, Firefox 25, IE 10 by adding different language packs.
- Also got exposure by directly communicating with client.
- Prepared & executed Test cases, Conducted Test Case Review and Test Results preparation.
- Responsible for Functional, GUI, User Interface.
- Defects identification and logging the defects in QC
- Involving in the Defect life cycle (Detecting, Tracking, Classifying and reporting bugs through Defect Tracking System).
- Involved in Testing of both Classic View and Best Practise View of Application.
- Tested Application on IE 7.0 browsers.

Role

Test Engineer

Software / Tools / Technology Used

.Net, Windows 2000, Win XP, Apple Mac (Tiger), IPad3, Ipadmini, Samsung Galaxy W, Samsung Galaxy 3, Samsung Galaxy Tab

Project Description

Dior.com is a web based application and the tester has to test the application against different browsers (IE, Firefox, Safari, Chrome) and devices (Samsung Galaxy W, Samsung Galaxy tab, IPad 3, Ipadmini, Samsung Galaxy 3,4).

Dior.com is a web based application, when entering the website the site displays a short credit animation over a back ground image, like a carousel of animated images. We have The Film, Manifesto, Gallery, Fragrance sections. The core film plays automatically clicking on the film. The timeline stands on the left part of the player. Manifesto has vertically scrolling text displayed with translate button, text shows in localised languages after clicking on translate button. The Gallery section has Horizontal-scrollable gallery consisting of image thumbnails & text panels in a grid Keyboard navigation with left & right keys

We use bug reporting tool like Jira for posting bugs, Test Pad to maintain test cases and Confluence is a common repository for maintaining documents

Responsibilities

- Actively participated in review meetings, Requirements changes in functional review meetings and regular Status meetings.
- Prepared & executed Test cases, Conducted Test Case Review and Test Results preparation.
- Responsible for Functional, GUI, User Interface.
- Defects identification and logging the defects in QC
- Involving in the Defect life cycle (Detecting, Tracking, Classifying and reporting bugs through Defect Tracking System).
- Involved in Testing of both Classic View and Best Practise View of Application.
- Tested Application using Safari, Firefox 2.0, IE 6.0 and IE 7.0 browsers.

10

Role

Test Engineer

Software / Tools / Technology Used Java, Jboss, JSP Servlets, Ajax, Windows 2000, Windows XP, Windows 2003 Server

Project Description

The objective of this project is to deploy service management toolset in support of National Grid.

In addition this project will develop, test, and deploy the scripts which enable the ebonding between the SM Integrator's toolset and CSC's SM tools. This project supports the enablement of the following Service Levels (SLAs) by generating data utilized in SLA calculation and measurement.

Responsibilities

- Actively participated in review meetings, Requirements changes in functional review meetings and regular Status meetings.
- Prepared & executed Test cases, Conducted Test Case Review and Test Results preparation.
- Responsible for Functional, GUI, User Interface.
- Defects identification and logging the defects in QC
- Involving in the Defect life cycle (Detecting, Tracking, Classifying and reporting bugs through Defect Tracking System).
- Involved in Testing of both Classic View and Best Practise View of Application.
- Tested Application on IE 7.0 browsers.

Client Name Safeway
Project Title / Name Safeway
Project Duration Feb'2011-Dec'11
Project Location USA
Team Size 15
Role Senior Test Engineer
Software / Tools / Technology Used Java, Jboss, JSP Servlets, Ajax, Windows 2000, Windows XP, Windows 2003 Server

Project Description

Safeway is an online shopping site. User can clip his offers, complete purchase and make payments online. J4U and DealMatch offers are exclusively for buyers to increase membership.

Responsibilities

- Actively participated in review meetings, Requirements changes in functional review meetings and regular Status meetings.
- Prepared & executed Test cases, Conducted Test Case Review and Test Results preparation.
- Responsible for Functional, GUI, User Interface, Compatibility Testing
- Defects identification and logging the defects in QC.
- Involving in the Defect life cycle (Detecting, Tracking, Classifying and reporting bugs through Defect Tracking System).
- Tested Application using Safari, Firefox 2.0, IE 6.0 and IE 7.0 browsers.
- Involved in drafting Minutes of Meeting, Daily Status Report, Test Summary Report.
- Worked as SQA Coordinator for Safeway Manual Testing Team

Client Name United Airlines
Project Title / Name Mobile
Project Duration May'10-Feb'11
Project Location USA
Team Size 25
Role Senior Test Engineer
Software / Tools / Technology Used .Net, Windows 2000, Win XP, Apple Mac (Tiger)

Project Description

United Airlines is one of the largest operating airline carriers in the world with a fleet size of 359. It generated revenue of 21 \$billion. United web application is tested before it meets the end-user. United Airlines, a wholly owned subsidiary of UAL Corporation (NASDAQ: UUA), operates approximately 3,300* flights a day on United and United Express to more than 230 U.S. domestic and international. With key global air rights in the Asia-Pacific region, Europe and Latin America, United is one of the largest international carriers based in the United States. New enhancements are made to the application on a regular basis and every enhancement is tested thoroughly in the staging environment.

Storefront is a merchandizing platform where the customers of United Airlines can buy subscription related products and travel options via united site. Subscription products include Economy plus Annual option membership, Red Carpet Club membership and Premier Baggage Annual option membership. Customer can themselves purchase these products via online or they can contact customer service representatives to buy subscription products and avail discount offers. Club Management system CMS, is an admin tool where the customer service representatives buy products on behalf of the customers. The same tool is also used to create promo codes for various promotional offers which can be used by end user to avail discount on various offers.

Responsibilities

- Actively participated in review meetings, Requirements changes in functional review meetings and regular Status meetings.
- Prepared & executed Test cases, Conducted Test Case Review and Test Results preparation.
- Responsible for Functional, Sanity and Regression testing
- Defects identification and logging the defects in QC
- Involving in the Defect life cycle (Detecting, Tracking, Classifying and reporting bugs through Defect Tracking System).
- Tested Application using IE 7.0 browser.

Client Name Freeride
Project Title / Name Snow.com
Project Duration Jun' 08 - May' 09
Project Location USA
Team Size 3
Role Test Engineer
Software / Tools / Technology Used .Net, Windows 2000, Win XP, Apple Mac (Tiger)

Project Description

Snow.com is an Application developed for a skiing resort wherein the user can view in different resorts and book for holidaying. The Application also provides the tourist to book resorts, view the Dining, Shopping and Activities experience he can avail at a resort and leave his comments in the guest book. He can make bookings online. This site is a very user friendly site.

Responsibilities

- Actively participated in review meetings, Requirements changes in functional review meetings and regular Status meetings.
- Prepared & executed Test cases, Conducted Test Case Review and Test Results preparation.
- Responsible for Functional, GUI, User Interface, Compatibility Testing
- Defects identification and logging the defects in Jira
- Involving in the Defect life cycle (Detecting, Tracking, Classifying and reporting bugs through Defect Tracking System).
- Involved in Testing of Snow.com Application.
- Tested Application using Safari, Firefox 2.0, IE 6.0 and IE 7.0 browsers.

Client Name Kerio
Project Title / Name Axxera
Project Duration Mar' 07 - Jun' 08
Project Location USA
Team Size 3
Role Test Engineer
Software / Tools / Technology Used Java, Jboss, JSP Servlets, Ajax, Windows 2000, Windows XP, Windows 2003 Server, Linux, Solaris, Unix, Oracle 10g, Toad, Nessus (Vulnerability Scanner)

Project Description

Axxera is a Network Monitoring system capable of providing the flexibility to the user to perform actions through the CI Agents. Axxera provides simpler and cheaper solutions to the organizational needs and targets operating system monitoring and security vulnerability in the network and alerts the concerned contacts.

The main objective of the project is to develop an integrated system, which is comprised of three major components namely *Agent*, *Messaging System* and *Portal*. Responsibility of each component is described below:

Agent – is an application which sits on the system or device that needs to be monitored for the system performance, application status, security threats, misuse and unintended functionality, intimates the Messaging system in case of an alert.

Messaging System – is an application, which receives the alert messages from the Agents being setup to monitor the devices, does a forensic analysis for the messages related to the security threats and saves them for showing up later to the Administrators using the Portal system.

Portal – is an application, which looks out for the alert messages being saved by the Messaging system and shows to the Network administrators for further action upon the alert being generated by the Agent.

Responsibilities

- Actively participated in review meetings, Requirements changes in functional review meetings and regular Status meetings.
- Preparing and executing Test cases, Conducted Test Case Review and Test Results preparation.
- Responsible for Sanity, Functional, GUI, Database, Installation, Localization/Globalization Testing
- Defects identification and logging the defects in Zoom

- Involving in the Defect life cycle (Detecting, Tracking, Classifying and reporting bugs through Defect Tracking System).
- Involved in testing Windows, Linux, Solaris ,Snort and Forensic Agents.
- Testing Application Portal and Preparing Traceability Matrix.

Client Name GAP Inc.
Project Title / Name Yantra 7x
Project Duration Sept' 06 - Feb' 07
Project Location USA
Team Size 3
Role Test Engineer
Software / Tools / Technology Used J2EE, Oracle9i, Windows 2000
Project Description

Yantra 7x Distributed Order Management provides highly configurable order management capabilities for all types of customer orders (products and services). It aggregates, manages and monitors orders from all channels, and coordinates fulfillment processes across the extended enterprise. Distributed Order Management checks for inventory availability and provides rules-based, dynamic allocation across all internal and external fulfillment locations. Moreover, it coordinates critical third-party services, such as involved participants.

Yantra OMS has a 'credit, logistics and installation, and enables collaborative execution among all Fraud Check' component built into the Order Processing System. The purpose of this component is to identify fraudulent orders and avoid losses incurred due to processing of such orders. FVC (Fraud Velocity Check) is one such component that verifies the number of orders placed by a customer against a threshold limit (i.e. maximum allowed orders with in a stipulated period of time by a customer.)

Responsibilities

- Actively participated in review meetings, Requirements changes in functional review meetings and regular Status meetings.
- Preparing & executing Test cases, Conducted Test Case Review and Test Results preparation.
- Responsible for Functional, GUI and Database Testing.
- Identifying and logging the defects in Test Director
- Involving in the Defect life cycle (Detecting, Tracking, Classifying and reporting bugs through Defect Tracking System).
- Involving in complete test life cycle and development of Test Plan
- Actively involved in taking the onus of the team's responsibilities.

Client Name Artemis International Solutions Corporation
Project Title / Name Investment and Portfolio Management Project
Project Duration Nov' 05 - Sept' 06
Project Location UK
Team Size 12
Role Test Engineer
Software / Tools / Technology Used Java, J2EE, JSP, Apache Tomcat Server, Winrunner, Bugzilla, Lotus Notes
Project Description

Artemis7 is a Portfolio management project. The project contains 3 modules A7, RTE, DM.

A7: It deals with how to utilize the company's resources, manpower and manage them effectively. It also deals with creation of investments, programs, projects and tasks.

RTE: It stands for timesheet management. It contains the daily time spent by employees on job. This has to be approved by some senior officer.

DM (Demand Management): It consists of creating various demand types and demands. Associating various demands with demand types and linking actions to it.

Responsibilities

- Actively participated in review meetings, Requirements changes in functional review meetings and regular Status meetings.
- Prepared and executed Test cases, Conducted Test Case Review and Test Results preparation.
- Responsible for Sanity, Functional , Regression, GUI and Database Testing.
- Defects identification and logging the defects in Lotus Notes and Bugzilla.
- Involving in the Defect life cycle (Detecting, Tracking, Classifying and reporting bugs through Defect

- Tracking System).
- Involved in Testing of A7, DM modules.
- Writing the Scripts and enhancing the scripts in sync with the project
- Worked as Build Manager, Created and Exported Dumps.

Education

Bachelor of Engineering [Computers]

2002

Mahatma Gandhi College of Engineering and Technology, Panvel

Technical Skills

Category	Software / Tool / Technology	Proficiency
Languages	C, C++, TSL	Proficient
Operating Systems	DOS, Windows 9x/2000, Unix	Proficient
DBMS	Oracle, SQL-Server	Proficient
