Profile summary

I simplify user interaction with complex systems by making product knowledge easy to access and consume. I create and maintain documentation for software, infrastructure, and VoIP-based systems across SaaS and enterprise environments.

Documents type includes the following:

- Product overviews
- Software Change Notices
- How-to-Guide for:
 - Installation, configuration and other system set-up processes.
 - Hardware assembly, Hardware trouble shooting, Vendor set-up and assembly.
 - Core technical processes include server deployment, upgrade and migration, patch update and more.
 - Feature workflows.
 - API's, SDK and Cloud Infrastructure
- Role based guides (Admin, Engineer, Operator and end user)
- Troubleshooting guides to reduce support tickets
- Release notes to capture product evolution

Other core competencies include the following:

- Strong focus on clarity, simplicity, and user-centric documentation.
- Cross-functional collaboration with developers, QA teams, and stakeholders
- Ability to create logically structured content that is easy to scan, understand, and act upon.
- Experience in owning and driving documentation projects independently.
- Hands-on experience with Docs-as-Code workflows (Markdown, Git, GitHub)
- Experience documenting VoIP systems (SIP, RTP, Kamailio, Asterisk, Flexisip) and infrastructure setups
- Familiarity with ITIL service management and operational documentation

Tools & software proficiency

Following is the list of tools and software I used to date for various workflows:

- **Docs-as-code workflow:** Markdown, Git, GitHub and Gitlab.
- **Code Editors & IDEs:** Visual Studio Code, IntelliJ Tools, Android Studio, Eclipse
- **Project and knowledge management:** Jira and Confluence Wiki
- **Documentation Tools:** Madcap Flare, Adobe FrameMaker, Adobe RoboHelp
- **Developer and API Tools:** Postman, REST APIs, Basic HTML & CSS, JSON, cURL
- **Languages:** Java, R, C, Python,
- **Platforms:** AWS, Azure, GCP, Windows, UNIX & UNIX-Like
- **Other tools:** Microsoft Word, Google Docs, MS Outlook, MS Office, Adobe Illustrator, Adobe Express, Canva, Draw.io, Microsoft Snipping Tool, Ollama, Claude AI, etc.
- **Familiar with** XML-based authoring workflow, DITA and API documentation, SDLC.

Experience summary

Honeywell (May 2025—March 2026) | Technical writer | Bangalore | Payroll: Diensten Tech Ltd

Product and modules I worked on:

- PMD product modules for industrial control and monitoring systems
- Industrial control system components and monitoring modules
- Software modules covering configuration, deployment, and system workflows
- Firmware and hardware-software integration components
- System-level modules for installation, commissioning, and diagnostics

Roles and responsibilities:

- Created product overviews to explain system architecture, modules, and workflows for industrial software and hardware systems

- Conceptual guides to build mental models
- How-to-Guide for:
 - Installation, configuration, and system setup
 - Core technical processes including deployment, commissioning, upgrades, migration, and maintenance
 - Feature workflows and operational procedures
- Role based guides (Admin, Engineer, Operator and end user)
- Troubleshooting guides to reduce support tickets
- Release notes to capture existing feature enhancements, new feature updates, bug fixes and hot fixes.

Target audience: The target audience includes enterprise customers using industrial control and monitoring systems, along with internal and external stakeholders such as product managers, developers, QA teams, system engineers, and support teams.

It also includes user roles such as system administrators, field engineers, operations teams, and maintenance personnel. Essentially, the content is valuable for anyone involved in the deployment, configuration, operation, or support of industrial systems within an organization or as a service provider.

Analytics & User Feedback

SmartBear Collaborator for review and feedback tracking: I use SmartBear Collaborator to manage peer reviews, gather feedback from SMEs, and ensure documentation accuracy, consistency, and quality across releases.

Jira for task tracking and workflow management: I use Jira to track documentation tasks, manage workflows aligned with Agile sprints, collaborate with cross-functional teams, and ensure timely delivery of documentation updates.

Vidal Health *(Jan. 2025 — May. 2025) | Technical writer | Bengaluru*

Roles and responsibilities: Developed end-to-end documentation for healthcare SaaS products, including product overviews, user manuals, administrator guides, and API documentation. Created standard operating procedures (SOPs) for clinical operations, claims processing, and system workflows, along with step-by-step how-to guides for system usage and onboarding. Produced knowledge base articles, FAQs, and help center content tailored for both technical and non-technical users. Collaborated with cross-functional teams, including developers, product managers, and operations teams, to gather requirements and ensure documentation accuracy, consistency, and compliance with healthcare standards.

Aura Smart *(April. 2022 — Aug 2024) | Technical writer & Sr Software Developer | Bengaluru*

Roles and responsibilities: Worked as a Senior Software Developer and Technical Writer, contributing to SaaS platforms, embedded systems, VoIP infrastructure, and large-scale integrations, and created:

- Conceptual guides to build mental models
- How-to-Guide (basically SOPs) for:
 - Installation, configuration, and system setup across SaaS platforms, embedded devices, and cloud environments.
 - API and integration documentation covering REST APIs, GraphQL APIs, and system-to-system communication workflows.
 - Core technical processes including deployment, integration, upgrade, migration, patching, and maintenance
- Application architectural diagrams and Solution Architecture Documents (SAD) for SaaS, embedded, and distributed systems.
- Software documentation covering microservices architecture, cloud services (AWS, GCP), identity management, and system workflows
- Embedded systems documentation including Yocto-based OS development, custom board configurations, and firmware-level integrations
- Integration documentation and testing workflows for interconnected systems such as CCTV, video door phones, indoor monitors, and access control systems
- VoIP and communication system documentation including SIP server setup, firewall configurations, security practices, and FreePBX automation using APIs
- Automation and scripting documentation for user lifecycle management, cloud operations, and system optimization across platforms

Target audience: Developers, DevOps, SRE, embedded engineers, infrastructure and cloud teams, system integrators, data center engineers, and operations teams, along with internal stakeholders and enterprise clients (ensuring seamless integration, system reliability, scalability, and compliance across SaaS, embedded, and communication platforms).

Content ideation and initiatives undertaken

I approach content ideation through systems thinking to:

- Make product knowledge accessible within system workflows, enabling in-the-moment assistance for users across SaaS platforms, infrastructure systems, and VoIP environments.
- Make content easy to discover, search, and navigate within product interfaces, documentation portals, and digital ecosystems.
- Gather Feedback from stakeholders, support teams, and users

Initiatives include the following:

- Task tracker automation for managing documentation workflows and improving delivery efficiency
- Smart links for contextual navigation and improved content discoverability
- Markdown to PDF automation for streamlined documentation publishing
- In-product help and enablement resources (articles, guides, and contextual assistance)

Educational details

Course	Institute	University	Duration
M.Tech Computer Science Engineering (CSE)	CR Engineering College, Tirupathi	JNTU Anantapur	2024-Present
B.Tech Electronics and Communication Engineering	SV College of Engineering, Tirupathi	JNTU Anantapur	2014-2018
